Angestrebte Lernergebnisse/ target educational objective	The students are able to use and interpretate experimental tests as an instrument for the prediction of hydraulic and morphological processes.
11.1: Scale models II (Ettmer)	Review to Froude and Reynolds similarity laws and basics in model scaling. Morphological similarity laws and application on physical models. Physical models as an instrument of prediction for hydraulic and morphological processes. Basic research and applied research experiments.
11.2: Morphological flume experiments (Orlik)	Morphological flume experiments with experimental tests. Autonomous measurement of settling velocity and critical velocity for the initiation of motion of sediment particles as most important parameters for morphological processes. Flume experiments in a sediment recirculating flume with a high resolution detection of sediment transport.
11.3: Scouring at hydraulic structures (Orth)	Erosion processes and scouring at hydraulic structures like piers, abutments, wiers etc. . Experimental tests under clear water, bed-load and suspension load conditions. Prediction of morphological processes.
